

August 2023

To whom it may concern,

Clover inkjet cartridges are tested for page yield in accordance with ISO/IEC 24711 and utilizing the ISO/IEC 24712 test suite. This procedure is performed during the Research and Development phase for both the OEM as well as the test cartridges Clover produces. Confirmation tests are also performed using the ISO/IEC 24712 test suite in the routine testing of retention samples.

If there are any questions concerning the processes and procedures used by Clover Environmental Solutions during the manufacturing or testing of inkjet cartridges, please feel free to contact your local Clover Environmental Solutions representative for further information.

Best Regards,

Lisa M. Hawkins  
Director of Inkjet Quality
